

Bar graph showing the effect of 1,1'-methylenebis(2,2,2-trifluoroethyl)phosphonate on L-calcium current. The y-axis represents L-Calcium Current (%), ranging from 0 to 140. The x-axis shows four conditions: Control, 0.1 μ M, 1 μ M, and 10 μ M. The legend indicates the corresponding bar patterns. Error bars are shown for each condition. $n = 4$.

Condition	L-Calcium Current (%)
Control	~100
0.1 μ M	~105
1 μ M	~125
10 μ M	~125

$$n = 4$$
